

specter

Specter's appearance is characterized by the two elliptical cut-outs that turn a simple tube into an object that shows its inside and outside simultaneously. In terms of the light, this play between in and out also balances the mixture of direct and indirect light. Specter is available in a variety of color combinations. The LED module is adjustable in height and therefore allows a wide range of light beams, from point to floating light. Specter is always showing two sides.
